Structural Engineer -Full Time-RSCTX50035

Description
Structural Engineers design structures that must endure stresses and pressures inflicted through human use and environmental conditions, such as buildings, bridges, or roadways. They configure structures, choose appropriate building material, inspect the construction work, and ensure the structural soundness of buildings and structures. We are looking for excellent mathematical and investigative skills along with the ability to problem solve with accuracy. An interest in ensuring the safety and physical integrity of buildings, blueprints capability, knowledge of codes and legal regulations along with budget management skills all apply to the skills required of the Structural Engineer.
